

TurfPride Features, Advantages, and Benefits:

- Reel Diamond is a patented product (#5603739)
- Environmentally safe abrasive compound
- Electronic-grade water
- pH neutral and washes off with a common garden hose
- Formulated with precisely enough viscosity to permanently suspend the abrasive
- Tackiness additives to keep the product on the blades, not on the floor or the technician
- Lubricant to dissipate heat on the blades, minimizing warpage
- Rust inhibitors to minimize corrosion
- Industrial diamond to provide faster cutting action with a sharper edge

The Packaging:

- Lot number on each pail allows complete traceability through manufacturing and QC
- SCIN number on each pail tracks abrasive within the formulation
- Pail lid features an O-ring top seal. Unique locking feature for ease of use, product freshness, and cleanliness between uses.
- Colored lids for different sizes of compound are available
- Packaged in 36-pail pallets or 1-pail boxes

Quantifiably the Finest Lapping Compound on the Market Today

"Dear Larry,

"I just wanted to let you know that we completed the tests on your lapping compound. My superintendent Jamie put three new bedknives on one of our triplex mowers and they were lapped-in with your compound and two competitors' products, all for five minutes. Each knife was adjusted and treated comparably. The 18th green was cut using this mower, and one pass was made. The cuttings were kept separately, and the bedknives marked.

"Similar test conditions were set up on a fairway mower using two different competitors' products as well as yours, cutting wet grass. We witnessed similar results.

"After witnessing the resulting pictures, it was clearly evident to us that we received a much cleaner cut with your product. We determined that it was a 'no-brainer' to make the change to your product. We already have, with tremendous results.

When comparing quality and price point, I'm certain you've got a winner."

Yours sincerely,

Tom Martty
General Manager
Woodforest Golf Club

Lapping Compound

The following grit sizes are available: 50, 80, 100, 120, 180, 220.

TurfPride Lapping Compound

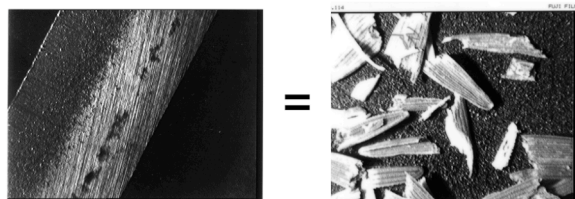

TurfPride is proud to introduce a new back lapping compound. We have taken a low-tech, commodity product, and brought it into today's high-tech marketplace.

In the past, technicians have used the look, smell, and sound of lapping compound working to judge the quality of the product. We feel this is far too arbitrary.

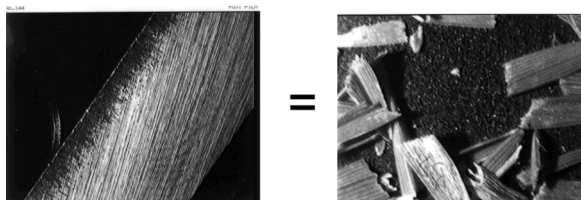

Below you will find pictures that will show how new bed-knives look after they have been lapped-in with the TurfPride product as well as with other leading competitors' products. Pictures will show grass clippings that are the result of this reel-sharpening test. We feel the results will show that after sharpening with the TurfPride compound, a sharper, cleaner cut of the clippings will provide a much smoother surface with less bruising to the grass, leaving a high-quality, and healthier, playing surface.

Competitor #1

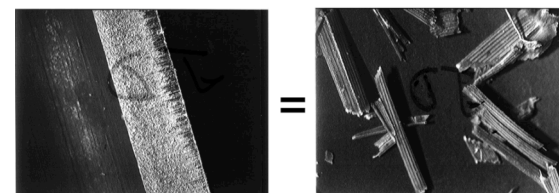

Competitor #2

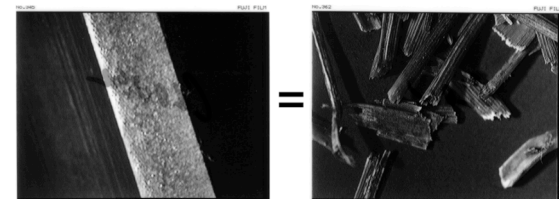

Our Product

Greens Test

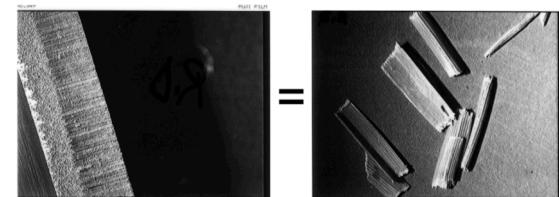

In both Competitor #1 and Competitor #2 note the non-uniformity and coverage of the sharpening action on the bed-knife. Also note the ragged, torn clippings these two products deliver. The TurfPride compound gives a much more uniform and much larger coverage of the bed-knife. Note the cleanly cut clippings that results from the use of our product.

Competitor #3

Competitor #4

Our Product

Fairway Test (Wet Grass)

In Competitor #3 note the gouging and non-uniformity of sharpening action, once again leaving jagged, torn clippings. With Competitor #4, although the sharpening action is uniform, it has sharpened the bed-knife very slowly. The grass clippings are a little cleaner cut, but tearing of the cuttings is still evident. For TurfPride, note the uniformity with which the bed-knife is sharpened, and once again delivers a sharper, cleaner cut.
